

Email Address Format Fix

Purpose

Clean up email addresses with an invalid format.

Field Description

- **Email attribute to fix** - Input email field
- **Write fixed email to** - Output email field
- **Advanced configurations** - specify if you would like to use a different reference file than our standard *Reference - Domain suffixes*

Tips

- This task will correct email format and invalid suffix.
- This task does not validate the email is a working email.
- This task does not validate the email address against any known email database.
- An E-mail address that cannot be reformatted will be copied in its original form.
- If an email address has no suffix at all, the task will add “.com” to the end of the email.
- This task requires the use of a Reference Data Source that contains the list of valid suffixes on the Internet. We highly recommend you use the Openprise reference *Reference - Domain Suffixes*.

Examples

The following examples of bad email addresses will correct to `dole@openprisetech.com` using this task:

- `dole@openprisetech.con` (invalid suffix)
- `dole@openprisetech,com` (comma or other special characters before the suffix)
- `dole@openprisetechcom` (missing dot before suffix)

- dole@openprisetech (missing suffix)
- dole@openprisetech..com (more than one .)
- dole@@openprisetech.com (more than one @)
- dole(at)openprisetech.com (use of (at) instead of @)
